## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1- 3, 5-9, 12-15, 17-18, 20 and 22 are rejected under 35 U.S.C. 102(e) as being anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over BESSELINK (6,488,702).

As to claims 1-3, 5-9, 12-15, 17-18, 20 and 22, BESSELINK (Fig. 5-9) discloses a medical apparatus in a hollow cylinder configuration with open cells formed by longitudinal members or circumferentially spaced beams 64/68, which join at merge sections/connection points 11 as recited in the claims. BESSELINK medical apparatus meets all structural limitations as recited in the claims because the merge sections/connectionpoints 11 (Fig. 6-9) have width larger than struts 8 (Fig. 6-8). Alternatively, it would have been obvious to one of ordinary skill in the art at the time the invention was made to laser cut a tube so as to form the BESSELINK stent having wide merge sections integrally formed so as to avoid bulk and stress concentration at the connection points as recited in the claims.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3731

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 10, 19 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over BESSELINK (6,488,702).

As to claim 10 and 23, BESSELINK (6,488,702) ) discloses substantially all structural limitations as recited in the claim, except for a conical shape of the medical device in an expanded condition. Since the shape of the medical device in an expanded condition is dependent to the shape of a balloon used to expand the medical device, it would have been obvious to one of ordinary skill in the art at the time the invention was made to make CHUTER device having a conical shape with a balloon which can be expanded in the conical shape. Notice that CHUTER device meets all structural limitations as recited in the claims. In addition, a conical stent is well known in the art.

### ***Response to Amendment***

The amendment filed on 4/21/2004 under 37 CFR 1.131 has further defined the present invention but is still read on BESSELINK (6,488,702) as indicated in the above rejection.
